

Radar Level Transmitter

Monitor plural bunkers' levels from a mobile tripper

The mobile tripper application requires faster tracking performance. Several bunkers next to each other can be monitored and covered by only one unit Matsushima Radar Transmitter installed at the mobile tripper. Moreover, it is not affected by dust or steam.

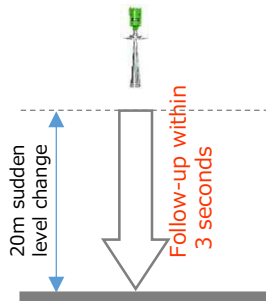

An example at woody biomass plant

Remarkable Points

①The latest Radar Level Transmitter (Ver.2.0) has improved tracking performance!
For example, it follows up in 3 seconds even with a sudden level change of 20 m.

②Microwave permeates dust and steam, which do not influence stable measurement.
